

Staff Backend Engineer, Platform
Vertex Systems — Remote (UK)

ABOUT THE ROLE

Vertex builds infrastructure tooling for regulated industries. The platform team owns the runtime every other team deploys onto.

RESPONSIBILITIES

- Operate and evolve our Kubernetes platform across three environments.
- Define the golden path other teams use to ship services.
- Own the Terraform modules that describe our AWS estate.
- Improve build and deploy times across roughly 40 services.
- Mentor engineers on platform and reliability practice.

REQUIREMENTS

- 6+ years in backend or platform engineering.
- Production Kubernetes experience — not just running kubectl, but operating clusters, debugging scheduling, and managing upgrades.
- Terraform in production, managing real infrastructure state.
- Strong Go.
- Deep understanding of CI/CD pipelines and build systems.
- Experience with observability tooling: Prometheus, distributed tracing.

NICE TO HAVE

- Exposure to SOC 2 or ISO 27001 compliance work.
- Experience with service mesh technologies.
- Public speaking or written technical advocacy.

BENEFITS

- Fully remote within the UK, with a quarterly team offsite.
- Learning budget of GBP 2,000 a year.
- Enhanced parental leave.
- Share options.

LEGAL

Vertex Systems is committed to equal employment opportunity regardless of race, colour, ancestry, religion, sex, national origin, sexual orientation, age, citizenship, marital status, disability, or veteran status. All employment is decided on the basis of qualifications, merit, and business need.
