

ALEX MORAN

Backend Engineer — Bristol, UK

alex.moran@example.com | github.com/example-alex

SUMMARY

Backend engineer with five years building payment and logistics services in Python and Go. Comfortable owning a service end to end, from schema design through on-call. Happiest working close to the data.

EXPERIENCE

Senior Backend Engineer, Meridian Logistics — 2022 to Present

- Rebuilt the shipment tracking service in Go, cutting p99 latency from 1.4s to 380ms by replacing per-request fan-out with a materialised view.
- Designed the PostgreSQL schema for a multi-tenant carrier integration used by 40+ carriers, including partitioning by tenant and month.
- Introduced contract tests between the tracking service and three consumers, which removed the weekly integration breakages that preceded them.
- Ran the on-call rotation for four services and wrote the runbooks the rest of the team now uses.

Backend Engineer, Halloway Payments — 2020 to 2022

- Built the reconciliation pipeline that matched card settlements against ledger entries, processing around 2 million transactions a day in Python.
- Migrated the ledger from MySQL to PostgreSQL with no downtime, using logical replication and a dual-write cutover.
- Added idempotency keys to the payments API after a duplicate-charge incident, and wrote the postmortem.

Junior Developer, Castle Interactive — 2019 to 2020

- Maintained a Django monolith serving a subscription box business.
- Wrote the reporting exports finance had previously produced by hand.

EDUCATION

BSc Computer Science, University of Bristol — 2019

SKILLS

Languages: Python, Go, SQL, some TypeScript

Data: PostgreSQL, Redis, Kafka

Infrastructure: Docker, AWS (ECS, RDS, S3), GitHub Actions

Practices: TDD, code review, incident response, technical writing
